

Putting Thaumatrope Together

1. Print off and cut out thaumatrope pictures provided.
2. Cut a 4 inch diameter (same size as the thaumatrope pictures) disk out of either cardboard or pressboard. The cardboard on that back of a tablet works fine.
3. Glue pictures onto the cardboard. Remember to glue the picture on the back upside-down.

4. Allow glue to dry.
5. Punch a hole on both sides of the glued disk as shown.
6. String about 8 inches of thread / yarn through each hole and tie the ends on each side together as shown.

To use, twist the string on both side and let spin round.

For the bird and cage thaumatrope, you will see the bird inside the cage.
